

TES - TIMBER COATINGS, MAINTENANCE & RESTORATION

Cutek CD50 Wood Preservative

Is an excellent all in one timber coating system, designed to enhance and maintain the natural appearance of wood that is available in a range of attractive colours as well as clear. **Cutek CD50** is different to other timber coating systems because it can be used prior to fixing and without a stand down period. **Cutek CD50** works from within by deeply penetrating and migrating throughout the timber substrate to displace liquid and gas phase moisture leading to

exceptional long term dimensional stability of the wood. **Cutek CD50** also resists surface mould and fungus. These features make **Cutek CD50** the perfect and necessary complement to our entire range.

Sara Clean

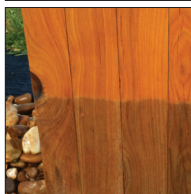

SARA Clean is designed as a cost effective, biodegradable cleaner for the restoration of uncoated, dirty and weathered timber. It is non hazardous, and will not damage substrates or vegetation adjacent to the timber surface being restored, eliminating the need for containment or masking.

CD77 Stripper

Is water soluble and designed to remove multiple layers of latex paints, stains, varnishes, linseed oils and other film forming coatings that hide the original colour and texture of wood. **CD77 Stripper** allows you to start over from the beginning, by restoring previously coated or greyed wood to a similar condition to new timber before application of non-film forming **Cutek® Wood Preservative**. **CD77 Stripper** is designed to restore timber without damaging the cell structure or interfering with future coatings on the newly stripped surface. **CD77 Stripper** also removes finishes from all types of surfaces, including masonry and metal.

WAO Stain Remover

Is used to remove discoloured and general weathering or greying in timbers. **WAO Stain Remover** counteracts the weathering process by eliminating years of discoloration and fungus from all species of timber. It cleans, brightens and restores wood surfaces back to the appearance of new timber. In addition it is exceptional at removing stubborn stains such as tannin stains, resin stains, fungal & algae stains, green CCA stains, oil and grease stains, surface greying and many other chemical stains that may destroy the natural beauty of wood.

WAO Stain Remover weathered wood restorer is significantly safer, more effective, and biodegradable.

TES - TIMBER COATINGS, MAINTENANCE & RESTORATION

Features of Cutek Wood Preservative

- **Cutek can be used on any species of timber... both hardwood and softwood**
- **Two coat system... no special primers or multiple products required**
- **Only requires a simple wash down before future recoating... no sanding ever!**
- **Resistant to unsightly surface fungus and mould**
- **Liquid and gas phase water repellency**
- **Assists with dimensional stability by deeply penetrating timber** to help control warping, cupping, and splitting

- **Can/should be applied immediately to newly laid decking or exterior surface timbers such as: Spotted Gum, Merbau and Jarrah - will slow the release of tannins down drastically**
- **May be quickly and easily applied by almost anyone with no "lap marks", or "laying off"... no need to hire a tradesman**
- **Suitable for use on just about anything made from wood**
- **Available in a wide range of natural colourtones that enhance the natural beauty of wood without hiding the grain**
